

Assignment 1: Introduction

Sara Diamond

OVERVIEW

This exercise accompanies the introductory material in Environmental Data Analytics.

Directions

1. Change “Student Name” on line 3 (above) with your name.
2. Work through the steps, **creating code and output** that fulfill each instruction.
3. Be sure to **answer the questions** in this assignment document.
4. When you have completed the assignment, **Knit** the text and code into a single PDF file.
5. After Knitting, submit the completed exercise (PDF file) to the dropbox in Sakai. Add your last name into the file name (e.g., “Lima_A01_Introduction.Rmd”) prior to submission.

The completed exercise is due on <>.

1) Discussion Questions

1. What are your previous experiences with data analytics, R, and Git? Include both formal and informal training.

Answer:

I used R last semester in ENV790 with John Poulsen. Before that class, I was briefly introduced to R in my senior thesis project in college. Outside of those two classes, I have not experimented with R. This class is the first time I have heard of and used Git.

2. Are there any components of the course about which you feel confident?

Answer:

I feel like I know the basics of R and statistical analyses. I understand what a lot of the functions mean and the correct way to write them in R. Most of what we did in 790 was statistics related so I feel I have a pretty strong grasp on those concepts and feel confident to execute them in R.

3. Are there any components of the course about which you feel apprehensive?

Answer:

Generally, R can be frustrating so I am nervous about the new things I will learn this semester. A lot of times when I was using R previously I forgot small things that caused various errors when I ran the code and having to figure out where the mistake was or what I was missing could be tedious and cause frustration. However, I surprised myself in how much I ended up loving working in R and was excited about the challenge of it, so I think it will be great to continue to sharpen my R skills this semester.

2) GitHub

Provide a link below to your forked course repository in GitHub. Make sure you have pulled all recent changes from the course repository and that you have updated your course README file.
